## Abstract

If we could able to predict the field for direction of a child at early stage than it could be very useful to get high performance in the domain of interest. In this Research Paper we focussed on issue and find a way to calculate the performance. We designed an Algorithm SR Z V1.0 and developed a Windows Based Application to implement it. The application is capable enough to calculate Students' field of Interest. To develop the application, we have used PHP for designing Frontend and MySQL in Backend. For data, we have done a survey among students who appeared in +2 studying at ELITE Institute in 2015. In the survey, we prepared a list of 15 Questions keeping in mind four parameters which includes Genetic, Financial Condition, Environment, Geographical Location and Food Habits. When we analyzed the data applying the algorithm, we found that it's working with accuracy of around 90%. In this survey, 150 students took part actively. After 4 years from the first Survey i.e. in 2015 we have done a new Survey on the same candidates who actively participated in the last Survey and checked whether they achieved their goals in their life. In this way, we achieved our Research Goal. **Keywords: SR Z V1.0, FoI, Survey, Elite, VPS, Raks** 

## **1.Introduction**

SR Z V1.0 is an efficient algorithm to calculate Students' Field of Interest (i.e. FOI). As we have discussed in the Abstract Section, we designed and developed an application in which SR Z V1.0 is implemented. We kept in mind that possible parameters which have to be considered in calculating or finding Student's Field of Interest are Genetic, Financial Condition, Environment, Geographical and Food Habits. Genetic parameter describes the occupation of Student's father and mother. Financial Condition involves father's salary, family's income, total number of dependents, earning members. We calculated Per Capita Income (i.e. PCI) using formula: Family Income / Total Number of Dependents.

Environment involves locality or area where they stay (for e.g. he / she may stay in an Apartment, Government Quarter, Housing Colony). Geographical parameter includes Home Town of the Student. Hood Habits describes whether the student is Vegetarian, Eggetarian and Non Vegetarian. We conducted a Survey at ELITE Institute among the students who appeared in +2 final exams. There were around 150 students, who took part in the survey actively. We made a survey report on the basis of survey, we carried out. Here, it should be noted that we

assigned certain points to the options of different questions. For instance, there's a question which we have asked in the survey, that "What is your Father's Occupation???" It has five options -1. Engineer 2. Doctor 3. Teacher 4. Politics 5. Business. We assigned 7 points to Engineer & Teacher, 8 points to Doctor, 9 points to Business, 10 points to Politics. After analyzing the data, we calculated or found the student's field of interest as a result.

### 2.BACKGROUND

Artificial Intelligence: Artificial Intelligence <sup>[1]</sup> is an emerging technology in today's world which enhances the ability of a machine so that it can take decision on its own. In another words, we can say that Artificial Intelligence is the property of machines, computer programs, and systems to perform the intellectual and creative functions of a person, independently find different ways to solve problems. It will help to draw conclusions and making itself capable of taking decisions just like Human's Brain which works in a particular situation to resolve the issue. Here it should be noted that AI is the acronym for Artificial Intelligence. Artificial Intelligence <sup>[2]</sup> has a long history which is growing very fast and enhancing itself. While designing an AI System, one should keep in mind few important points initially. These points include to make clear what the system can do and how efficient the designed Artificial Intelligence. There are two main goals of Artificial Intelligence which includes (a) To create Expert Systems that means the system exhibits intelligence in machine creating systems that understand, think, learn and behave like human.

1971	Artificial Intelligence System
1970	First Expert System was developed
1958	LISP programming Language developoed
1956	Birth of Artificial Intelligence @ Dartmouth Conference
1941	First Electronic Computer was developed
	Figure 1: Short history of Artificial Intelligence

**Intelligence:** Intelligence is the ability to acquire and apply different skills along with knowledge to solve a given problem. Intelligence is also concerned with the use of general capability to solve and learning various situations <sup>[3], [4], [5], [6], [7], [8], [9], [10], [11], [12], [13], [14], [15], [16], <sup>[17], [18], [19], [20], <sup>[21], [22], [23]</sup>. Intelligence is constituted with various cognitive functions such as Language attention, planning, memory, perception. Generally when we talk about evolution of Intelligence, last Ten years development is basically considered to be studied. Intelligence comprises of Human as well as Artificial intelligence both. In this case, Critical Human Intelligence is concerned with solving problems, reasoning and learning. Furthermore, humans have simple complex behaviours which they can easily learn in their life<sup>[24]</sup>.</sup></sup>

**Figure 2: Detailed Survey Report** 

After analyzing the detailed Survey Report provided in the above figure 2, we can say there were 13 questions in the survey conducted at ELITE Institute among the students who appeared in +2 final exams. First question of the survey was "What's your Ambition or what you want to become in your life".

## 4. Proposed Algorithm

Here, it should be noted that we are considering points system and using 8 points scale. We assigned 10 points to every questions except the five i.e. Q1, Q4, Q5, Q7 and Q8 which don't contain any point. Total point that may be collected is 80. The obtained points per question may vary from one to another as per the answer given. For instance, In Q2 which ask about the occupation of candidate's father, 5 options were given (1) Engineer (2) Doctor (3) Teacher (4) Politics (5) Business. If someone choose  $1^{st}$  option i.e. Engineer, he / she would get 7 points, whereas for selection of  $2^{nd}$  option i.e. Doctor, will get 8 points and so on. Finally we will calculate three things which are Per Capita Income (i.e. PCI), Total points collected and Average points collected. To calculate PCI we will use the formula .

PCI = Total Family Income / Number of Dependent

To calculate the Total Points Collected, just add all the points collected or obtained by answering the question. Finally to calculate the average points collected we will use the formula,

Average Points Collected = Total Points Collected / 8

How to use Web Application

Step 1: Fill the Survey Form. Please refer figure 3

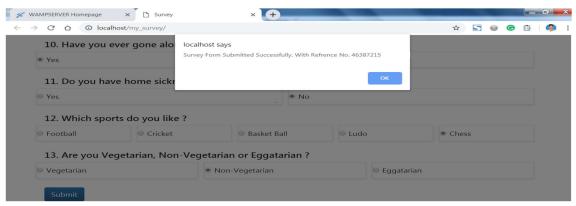

Step 2: Click on Submit Button. Please refer figure 4 and figure 5

Once you click on Submit Button, a message will be displayed "Survey Form Submitted Successfully with Reference #########". Finally a detailed report will be generated along with answers.

Step 3: Review or Analyze the Report.

#### TALENT IDENTIFICATION USING ARTIFICIAL INTELLIGENCE

#### Survey Report

1. What is your Ambition? OR what you want to become in your life ? Choosen Option : Engineer Points Collected :

2. What is your Father's Occupation and Qualification ? Choosen Option : Engineer Points Collected : 7

3. What is your Mother's Occupation and Qualification ? Choosen Option : Politics Points Collected : 10

4. What is your Father's Income ? Choosen Option : 160000 Points Collected :

5. Family's Income ? Choosen Option : 200000 Points Collected :

6. Joint Family or Nuclear Family ? Choosen Option : Joint Points Collected : 10

7. Number of dependents in your family ? Choosen Option : 5 Points Collected :

8. Number of earning members in family ? Choosen Option : 2 Points Collected :

9. Do you live in an Apartment, Society, Housing Colonies or Government Quarter ? Choosen Option : Government Quarter Points Collected : 8

10. Have you ever gone alone. out of city or any adventurous trip ? Choosen Option : Yes Points Collected : 10

11. Do you have home sickness ? Choosen Option : No Points Collected : 10

12. Which sports do you like ? Choosen Option : Chess Points Collected : 10

13. Are you Vegetarian, Non-Vegetarian or Eggatarian ? Choosen Option : Non-Vegetarian Points Collected : 9

Per capital Income : **Rs. 28571.43** Total Point Collected : **74** Maximum Point : **80** Average Points Collected : **9.25**

**Figure 6: Conclusion Table** 

## 6. Conclusion

With the help of this Algorithm SR Z v1.0 we can predict the student's field of interest with around 90% accuracy. From the survey report generation, it should be noted that more the "Total Points Collected" out of Total marks i.e. 80, more will be the possibility to select the same profession as of his / her father. Please refer figure 8 as given below. After 4 years from the first Survey i.e. in 2015 we have done a new Survey on the same candidates who actively participated in the last Survey and checked whether they achieved their goal or not. As a result of the Survey, we found that 90% of the students have achieved their goals in their life. In this way, we achieved our Research Goal.
