### THE NORTH KOREA MISSILE IN CNN NEWS: A NETMINER ANALYSIS

## **Namkil Kang**

Far East University, South Korea

The main purpose of this article is to analyze 20 pieces of CNN news broadcasted from 10<sup>th</sup> October 2022 to 23<sup>rd</sup> December 2022 regarding the North Korea missile. This analysis was conducted by the software package NetMiner. A major point to note is that the word missile has the highest frequency (455 tokens) and the highest proportion (0.39) and that the sevenword expression has the highest frequency (153 tokens) and the highest proportion (0.131). A further point to note is that topic 7 was the most frequently used one in 20 pieces of CNN news, followed by topic 6, topic 4, and topic 5, in that order. When it comes to the keywords used in 20 pieces of CNN news, the word *missile* was the most widely used one, followed by the word North Korea, the word test (the word launch), the word US, the word Japan, and the word South Korea, in descending order. It is particularly noteworthy that the word missile is the biggest in size in the word cloud of 20 pieces of CNN news. This in turn suggests that the word missile was the most frequent one in the CNN news and thus it is deemed to be the most central and pivotal. It is worthwhile noting, on the other hand, that the keyword *missile* is followed by the keyword North Korea. Finally, this article provides the links among the relevant keywords occurred in 20 pieces of CNN news regarding the North Korea missile. More specifically, the keywords time, North Korea, range, launch, test, Koreas, and Japan are directly linked to the word missile.

**Keywords**: CNN news, missile, North Korea, NetMiner, word cloud, topic, keyword

# 1. Introduction

The main goal of this article is to analyze 20 pieces of CNN news broadcasted from 10<sup>th</sup> October 2022 to 23<sup>rd</sup> December 2022 regarding the North Korea missile. Our analysis was conducted by the software package NetMiner. First, we aim to inquire into the frequency of nouns used in 20 pieces of CNN news and their proportion. Second, we aim at looking into word length, its frequency, and its proportion. Third, we aim to explore 7 topics and their keywords that are classified from the 1<sup>st</sup> keyword to the 5<sup>th</sup> keyword. Also, we investigate the frequency of topics occurred in 20 pieces of CNN news. Fourth, we aim at pinpointing the probability of becoming the 1<sup>st</sup> keyword, the 2<sup>nd</sup> keyword, and the 3<sup>rd</sup> keyword in 7 topics. Fifth, we aim to look into the frequency of the relevant words occurred in 20 pieces of CNN news. By doing so, we can see how frequently the relevant keywords were used in 20 pieces of CNN news. Sixth, we aim at considering a word cloud in which frequent and important words (the so-called keywords) are represented as bigger in size. This word cloud provides us with the picture of which keywords are frequent and important in 20 pieces of CNN news. Finally, we provide the visualization of the network among the relevant keywords occurred in 20 pieces of CNN news.

# 2. Results

# 2.1. Results of Frequency

In what follows, we aim at looking into the use of the relevant nouns occurred in 20 pieces of CNN news and their proportion:

**Table 1 Frequency of words** 

| Value | Frequency | Proportion | Cumulative<br>Proportion |
|-------|-----------|------------|--------------------------|
| 1.0   | 455       | 0.39       | 0.39                     |
| 2.0   | 265       | 0.227      | 0.617                    |
| 3.0   | 99        | 0.085      | 0.702                    |
| 4.0   | 79        | 0.068      | 0.77                     |
| 5.0   | 52        | 0.045      | 0.815                    |
| 6.0   | 34        | 0.029      | 0.844                    |
| 7.0   | 16        | 0.014      | 0.858                    |
| 8.0   | 19        | 0.016      | 0.874                    |
| 9.0   | 17        | 0.015      | 0.889                    |
| 10.0  | 10        | 0.009      | 0.897                    |
| 11.0  | 12        | 0.01       | 0.907                    |
| 12.0  | 8         | 0.007      | 0.914                    |
| 13.0  | 7         | 0.006      | 0.92                     |
| 14.0  | 11        | 0.009      | 0.93                     |
| 15.0  | 5         | 0.004      | 0.934                    |
| 16.0  | 4         | 0.003      | 0.937                    |
| 17.0  | 7         | 0.006      | 0.943                    |

| 18.0 | 6 | 0.005 | 0.949 |
|------|---|-------|-------|
| 19.0 | 5 | 0.004 | 0.953 |
| 20.0 | 2 | 0.002 | 0.955 |
| 21.0 | 1 | 0.001 | 0.955 |
| 22.0 | 1 | 0.001 | 0.956 |
| 23.0 | 2 | 0.002 | 0.958 |
| 24.0 | 5 | 0.004 | 0.962 |
| 25.0 | 3 | 0.003 | 0.965 |
| 26.0 | 1 | 0.001 | 0.966 |
| 27.0 | 5 | 0.004 | 0.97  |
| 28.0 | 5 | 0.004 | 0.974 |
| 29.0 | 2 | 0.002 | 0.976 |
| 30.0 | 1 | 0.001 | 0.977 |
| 31.0 | 1 | 0.001 | 0.978 |
| 32.0 | 1 | 0.001 | 0.979 |
| 33.0 | 3 | 0.003 | 0.981 |
| 34.0 | 1 | 0.001 | 0.982 |
| 36.0 | 2 | 0.002 | 0.984 |
| 37.0 | 1 | 0.001 | 0.985 |
| 42.0 | 1 | 0.001 | 0.985 |
| 43.0 | 1 | 0.001 | 0.986 |
| 45.0 | 2 | 0.002 | 0.988 |

| 48.0  | 2    | 0.002 | 0.99  |
|-------|------|-------|-------|
| 56.0  | 1    | 0.001 | 0.991 |
| 57.0  | 1    | 0.001 | 0.991 |
| 63.0  | 1    | 0.001 | 0.992 |
| 69.0  | 1    | 0.001 | 0.993 |
| 72.0  | 1    | 0.001 | 0.994 |
| 74.0  | 1    | 0.001 | 0.995 |
| 96.0  | 1    | 0.001 | 0.996 |
| 101.0 | 1    | 0.001 | 0.997 |
| 146.0 | 1    | 0.001 | 0.997 |
| 147.0 | 1    | 0.001 | 0.998 |
| 215.0 | 1    | 0.001 | 0.999 |
| 348.0 | 1    | 0.001 | 1     |
| Total | 1166 | 1     |       |

It is interesting to observe that one noun has the highest frequency (455 tokens) and the highest proportion (0.39). Note that its cumulative proportion is 0.39. Perhaps it is worthwhile saying that there are two words whose frequency is 265 tokens (the second highest). Their proportion and their cumulative proportion are 0.227 and 0.617, respectively. It is probably worthwhile noting that three words occurred in 20 pieces of CNN news and that their frequency is 99 tokens (the third highest). Notice that their proportion and their cumulative proportion are 0.085 and 0.702, respectively. I think it should also be pointed out that there are four words whose frequency is 79 tokens (the fourth highest). Interestingly, their proportion is 0.608 and their cumulative proportion is 0.77. It must also be stressed that five words appeared in 20 pieces of CNN news and that their frequency is 52 tokens (the fifth highest). We thus conclude that one noun has the highest frequency (455 tokens) and the highest proportion (0.39).

# 2.2 Word length

This section centers on investigating word length, its frequency, and its proportion:

Table 2 Word length

| Value | Frequency | Proportion | Cumulative<br>Proportion |
|-------|-----------|------------|--------------------------|
| 2.0   | 20        | 0.017      | 0.017                    |
| 3.0   | 76        | 0.065      | 0.082                    |
| 4.0   | 140       | 0.12       | 0.202                    |
| 5.0   | 140       | 0.12       | 0.322                    |
| 6.0   | 152       | 0.13       | 0.453                    |
| 7.0   | 153       | 0.131      | 0.584                    |
| 8.0   | 132       | 0.113      | 0.697                    |
| 9.0   | 92        | 0.079      | 0.776                    |
| 10.0  | 59        | 0.051      | 0.827                    |
| 11.0  | 48        | 0.041      | 0.868                    |
| 12.0  | 38        | 0.033      | 0.901                    |
| 13.0  | 27        | 0.023      | 0.924                    |
| 14.0  | 13        | 0.011      | 0.935                    |
| 15.0  | 4         | 0.003      | 0.938                    |
| 16.0  | 12        | 0.01       | 0.949                    |
| 18.0  | 6         | 0.005      | 0.954                    |
| 19.0  | 6         | 0.005      | 0.959                    |
| 20.0  | 4         | 0.003      | 0.962                    |
| 21.0  | 3         | 0.003      | 0.965                    |

| 22.0  | 8    | 0.007 | 0.972 |
|-------|------|-------|-------|
| 23.0  | 4    | 0.003 | 0.975 |
| 24.0  | 1    | 0.001 | 0.976 |
| 25.0  | 3    | 0.003 | 0.979 |
| 26.0  | 4    | 0.003 | 0.982 |
| 27.0  | 2    | 0.002 | 0.984 |
| 28.0  | 2    | 0.002 | 0.985 |
| 29.0  | 1    | 0.001 | 0.986 |
| 31.0  | 1    | 0.001 | 0.987 |
| 32.0  | 2    | 0.002 | 0.989 |
| 33.0  | 1    | 0.001 | 0.99  |
| 34.0  | 3    | 0.003 | 0.992 |
| 35.0  | 2    | 0.002 | 0.994 |
| 42.0  | 2    | 0.002 | 0.996 |
| 44.0  | 1    | 0.001 | 0.997 |
| 45.0  | 3    | 0.003 | 0.999 |
| 46.0  | 1    | 0.001 | 1     |
| Total | 1166 | 1     |       |

It is particularly noteworthy that the seven-word language has the highest frequency (153 tokens) and the highest proportion (0.131). Note that its cumulative proportion is 0.584. It must also be said that the six-word language is the second highest. More specifically, its frequency is 152 tokens and its proportion and its cumulative proportion are 0.13 and 0.453, respectively. It is worth saying, on the other hand, that the four-word language and the five- word language are the third highest (140 tokens) and that their proportion is 0.12. It is interesting to consider the eight-word language. Its frequency is 132 tokens (the fourth highest) and its proportion and

cumulative proportion is 0.113 and 0.697, respectively. Finally, it is worth mentioning that the nine-word language is the fifth highest (92 tokens) and that its proportion and cumulative proportion are 0.079 and 0.776, respectively. We thus conclude that the seven-word language (expression) was the most frequently used one (153 tokens) in 20 pieces of CNN news.

## 2.3. Topic Information

This section is focused on analyzing 7 topics and their keywords occurred in 20 pieces of CNN news. Table 3 shows 7 topics and 5 keywords consisting of them:

**Table 3 Topic information** 

|         | 1st<br>Keyword | 2nd<br>Keyword | 3rd<br>Keyword | 4th<br>Keyword | 5th<br>Keyword |
|---------|----------------|----------------|----------------|----------------|----------------|
| Topic-1 | North<br>Korea | KCNA           | Kim            | drill          | South<br>Korea |
| Topic-2 | missile        | South<br>Korea | leader         | Kim Jong<br>Un | Kim            |
| Topic-3 | missile        | launch         | state          | Japan          | medium         |
| Topic-4 | US             | Japan          | exercise       | kilometer      | carrier        |
| Topic-5 | test           | North<br>Korea | North          | Koreas         | official       |
| Topic-6 | missile        | North<br>Korea | ICBM           | CNN            | Friday         |
| Topic-7 | weapon         | testing        | Koreas         | program        | launch         |

It must be emphasized that the keywords *North Korea*, *KCNA*, *Kim*, *drill*, and *South Korea* constitute topic 1. As can be seen from Table 3, the 1<sup>st</sup> keyword is *North Korea*, which in turn implies that *North Korea* was the most widely used one in topic 1. It must be pointed out, on the other hand, that the keywords *missile*, *South Korea*, *leader*, and *Kim* are made up of topic 2. As expected, the keyword *missile* was the most occurred one in topic 2. Quite interestingly, the keywords *missile*, *launch*, *state*, *Japan*, and *medium* consist of topic 3. Exactly the same can be said about topic 3. The word *missile* is the most occurred keyword in topic 3, thereby becoming the 1<sup>st</sup> keyword. It should also be noted that topic 6 is constituted by the keywords *missile*, *North Korea*, *ICBM*, *CNN*, and *Friday*. Again, the keyword *missile* was the most occurred one in topic 6. Finally, it is interesting to point out that topic 7 includes the keywords

weapon, testing, Koreas, program, and launch. In this topic, the keyword weapon is the most frequently used one, thus becoming the 1<sup>st</sup> keyword.

Now let us turn our attention to the use of each topic in 20 pieces of CNN news:

**Table 4 Frequency of each topic** 

|         | # of sentences |
|---------|----------------|
| Topic-1 | 55             |
| Topic-2 | 95             |
| Торіс-3 | 86             |
| Topic-4 | 102            |
| Topic-5 | 97             |
| Торіс-6 | 109            |
| Торіс-7 | 114            |

It is significant to note that topic 7 occurred 114 times (the highest). As observed in Table 3, the keywords weapon, testing, Koreas, program, and launch are made up of topic 7. It is interesting to reconsider topic 6. When it comes to topic 6, it is the second highest. Simply put, it appeared 109 times and topic 7 is followed by topic 6 (the second highest). It is also worth mentioning that topic 4 occurred 102 times (the third highest). As exemplified in Table 3, the keywords US, Japan, exercise, kilometer, and carrier consist of topic 4. Perhaps it is worthwhile pointing out that topic 5 appeared 97 times (the fourth highest). As shown in Table 3, the keywords test, North Korea, North, Koreas, and official constitute topic 5. It can thus be concluded that topic 7 was the most widely used one in 20 pieces of CNN news, followed by topic 6, topic 4, and topic 5, in that order.

Now we turn our inquiry to the probability of becoming the 1<sup>st</sup> keyword, the 2<sup>nd</sup> keyword, and the 3<sup>rd</sup> keyword:

Table 5 Probability of becoming 1st keyword, the 2nd keyword, and the 3rd keyword

|                | 1 <sup>st</sup> | 1st Prob | 2 <sup>nd</sup> | 2nd Prob | 3 <sup>rd</sup> | 3 <sup>rd</sup> Prob |
|----------------|-----------------|----------|-----------------|----------|-----------------|----------------------|
|                | keyword         |          | keyword         |          | keyword         |                      |
| Topic 1        | Korea           | 0.045    | KCNA            | 0.034    | Kim             | 0.027                |
| Topic 2        | missile         | 0.075    | Korea           | 0.041    | leader          | 0.041                |
| Topic 3        | missile         | 0.108    | launch          | 0.096    | state           | 0.046                |
| <b>Topic 4</b> | US              | 0.075    | Japan           | 0.037    | exercise        | 0.027                |

| Topic 5 | test    | 0.128 | North   | 0.081 | North  | 0.067 |
|---------|---------|-------|---------|-------|--------|-------|
|         |         |       | Korea   |       |        |       |
| Topic 6 | missile | 0.139 | Korea   | 0.04  | ICBM   | 0.034 |
| Topic 7 | weapon  | 0.065 | testing | 0.03  | Koreas | 0.028 |

Perhaps it is worthwhile noting that in topic 1, the 1<sup>st</sup> keyword is *Korea* and its probability is 0.045 (the highest). As exemplified in Table 5, the keyword *Korea* is followed by the keyword *KCNA*. The probability to be the 1<sup>st</sup> keyword is 1.1% higher than the probability to be the 2<sup>nd</sup> keyword. It is noteworthy that in topic 2, topic 3, and topic 6, the 1<sup>st</sup> keyword is the word *missile*. Note, however, that the probability to be the 1<sup>st</sup> keyword in these three topics is somewhat different in that topic 6 is the highest (0.139), followed by topic 3 (0.108), and topic 2 (0.075), in that order. It must also be said that in topic 4, the probability of the 1<sup>st</sup> keyword is 0.075 (the highest). As can be seen from Table 5, the keyword *US* is followed by the keyword *Japan*. To be more specific, the former is 3.8% higher than the latter, thus proving that the word *US* is the 1<sup>st</sup> keyword. Finally, it is interesting to note that in topic 7, the 1<sup>st</sup> keyword is 3.5% higher than the 2<sup>nd</sup> keyword, hence demonstrating that the 1<sup>st</sup> keyword is *weapon*.

# 2.4. The frequency of words in the sentence

In the following, we aim at exploring the frequency of the relevant words occurred in 20 pieces of CNN news. The following list was cut off in the top 49 for the reason of space:

Table 6 Frequency of major words

| Number | Words       | Degree |
|--------|-------------|--------|
| 1      | missile     | 277    |
| 2      | North Korea | 193    |
| 3      | test        | 129    |
| 4      | launch      | 129    |
| 5      | US          | 91     |
| 6      | Japan       | 88     |
| 7      | South Korea | 72     |
| 8      | weapon      | 68     |
| 9      | North       | 68     |
| 10     | Koreas      | 59     |
| 11     | Kim         | 56     |
| 12     | year        | 54     |
| 13     | state       | 47     |
| 14     | time        | 46     |
| 15     | medium      | 44     |
| 16     | leader      | 42     |
| 17     | Kim Jong Un | 40     |
| 18     | Pyongyang   | 36     |
| 19     | KCNA        | 35     |

It is significant to note that the word *missile* has the highest frequency (277 tokens). More specifically, it occurred 277 times (the highest). It is interesting to consider the word *North Korea*. Quite interestingly, it appeared 193 times (rank-two). More interestingly, the words *test* and *launch* occurred 129 times in 20 pieces of CNN news. That is to say, they rank third in the list. It is also interesting to observe that the word *US* occurred 91 times (rank-four). It should be pointed out, on the other hand, that the word *Japan* occurred 88 times in 20 pieces of CNN news regarding the North Korea missile. It is interesting to point out that the word *South Korea* appeared 72 times in 20 pieces of CNN news (the sixth highest). To sum up, the word *missile* was the most widely used one in 20 pieces of CNN news, followed by the word *North Korea*, the word *test* (the word *launch*), the word *US*, the word *Japan*, and the word *South Korea*, in descending order.

#### 2.5 Word cloud

In the following, we aim at showing a word cloud related to the North Korea missile. Figure 1 shows the picture of which words are frequent and important in 20 pieces of CNN news:

### Figure 1 Word cloud

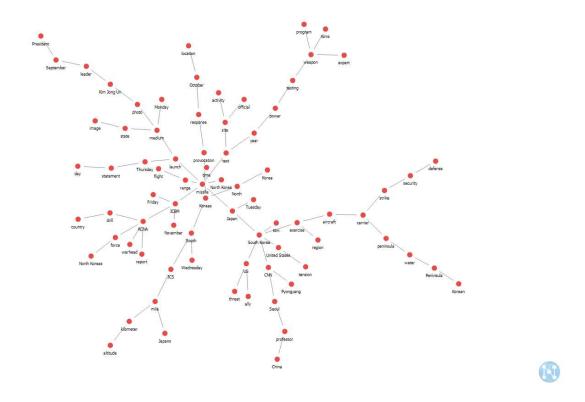

It is interesting to point out that the word *missile* is the biggest in size in the word cloud of 20 pieces of CNN news. This in turn implies that the word *missile* was the most frequent one in 20 pieces of CNN news and thus it is assumed to be the most central and important. It is worthwhile saying, on the other hand, that the word *missile* is followed by the word *North Korea*. More specifically, the word *North Korea* is the second biggest in the word cloud. This in turn suggests that it was the second most widely used one in 20 pieces of CNN news. As can be seen from the word cloud, the word *launch* is the third biggest, which in turn indicates that it is the third most central one. It is also interesting to observe the word *US*. It is the fourth biggest in the word cloud. This in turn shows that it is one of important aspects in 20 pieces of CNN news. It can thus be concluded that the word *missile* was the most frequent keyword in 20 pieces of CNN news, followed by the word *North Korea*, the word *launch*, and the word *US*, in that order.

## 2.6 The Visualization of Keywords

In what follows, we aim at showing the picture of the links among keywords related to the North Korea missile. Figure 2 shows the links among the relevant keywords in 20 pieces of CNN news:

Figure 2 Visualization of the relevant keywords

Most importantly, as exemplified in Figure 2, the keywords *time*, *North Korea*, *range*, *launch*, *test*, *Koreas*, and *Japan* are directly linked to the word *missile*. This in turn implies that these six keywords are closely related to the word *missile*. It is worthwhile noting, on the other hand, that the keywords *Kim*, *United States*, *CNN*, *US*, etc. are linked to the word *South Korea*. This in turn suggests that there is an interrelationship between these keywords and *South Korea*. Finally, the keywords *drill*, *force*, *warhead*, *report*, *ICBN*, etc. are directly linked to the word *KCNA*. To sum up, this visualization provides us with the information of which keywords are linked to a particular keyword. For the visualization of synonyms and keywords, see Kang (2022a, 2022b, 2022c, 2022d, (2023a, 2023b).

### 3. Conclusion

To sum up, we have analyzed 20 pieces of CNN news regarding the North Korea missile in terms of the Software Package NetMiner. In section 2.1, we have shown that one noun has the highest frequency (455 tokens) and the highest proportion (0.39). In section 2.2, we have also shown that the seven-word language has the highest frequency (153 tokens) and the highest proportion (0.131). In section 2.3, we have argued that topic 7 was the most widely used one in 20 pieces of CNN news, followed by topic 6, topic 4, and topic 5, in that order. In section 2.4, we have further argued that the word *missile* was the most frequently used one in 20 pieces of CNN news, followed by the word *North Korea*, the word *test* (the word *launch*), the word *US*, the word *Japan*, and the word *South Korea*, in descending order. In section 2.5, we have shown that the word *missile* is the biggest in size in the word cloud of 20 pieces of CNN news. This in turn implies that the word *missile* was the most frequent one in 20 pieces of CNN news

and thus it is the most central. It is worthwhile noting, on the other hand, that the word *missile* is followed by the word *North Korea*. In section 2.6, we have provided the links among the relevant keywords occurred in 20 pieces of CNN news regarding the North Korea missile. Specifically speaking, the keywords *time*, *North Korea*, *range*, *launch*, *test*, *Koreas*, and *Japan* are directly linked to the word *missile*. On the other hand, the keywords *Kim*, *United States*, *CNN*, *US*, etc. are linked to the word *South Korea*.
